

SuccessWare 4.3.7 Release Notes

The following items were added or repaired:

- Fixed correspondence history entry additions while sending e-mail.
- Fixed Internet Explorer and FlashPlayer 8 security interference with help guide display.
- Enhanced import record verification.
- Enhanced HTML display in client e-mail applications.
- Fixed an issue that caused a "ListRecords Set Does Not Exist" error message to appear on list windows.
- Fixed a problem where mailing labels would print the business name twice if only a business name was given for a client or prospect.
- Enhanced credit card security.
- Fixed the totals on the Sales Tax Report printout.
- Enhanced client name and address printing on order forms.
- Fixed a problem that prevented Revert from working on the Sales Tax Rates window.
- Fixed an issue that caused an error on session and order windows when no pricing versions exist.
- The Sales Tax Report is now broken down by State/Location/Tax Rates and shows receipt totals for locations as well as for states.
- New HASP drivers for Windows and Mac.
